

RTD Interview Questions & Answers – TILTLABS

UX Designer:

1. UX in AR/VR focuses on spatial interaction, comfort, and immersion rather than flat screens.
2. Immersive UX uses 3D space, gaze, and motion instead of touch-based interfaces.
3. TILTLABS excites me because it works on immersive and emerging technologies.
4. Common challenges include motion sickness, navigation, and user fatigue.
5. UX testing is done through observation, feedback, and comfort analysis.

XR Developer:

1. XR includes AR, VR, and MR.
2. Unity is popular due to multi-platform support and performance tools.
3. C# is mainly used for XR development.
4. High frame rates prevent motion sickness.
5. Challenges include performance optimization and device compatibility.

Producer / QA Analyst:

1. Ensures quality, coordination, and smooth delivery.
2. QA in XR includes comfort and interaction testing.
3. VR testing includes functionality, performance, and usability.
4. Bugs are prioritized by severity and user impact.
5. Motion sickness issues are reported and fixed through optimization.

Common:

1. I want to work at TILTLABS to grow in immersive technology.
2. Immersive tech creates engaging and impactful experiences.
3. In 2–3 years, I see myself growing and contributing meaningfully.
